Ethambutol
(e-tham-byoo-tole)

Description: Oral Antimycobacterial

Other Names for this Medication: Myambutol®

Common Dosage Forms: Veterinary: None. Human: 100 mg & 400 mg tablets.

Antimicrobial Classification: Critically Important

This information sheet does not contain all available information for this medication. It is to help answer commonly asked questions and help you give the medication safely and effectively to your animal. If you have other questions or need more information about this medication, contact your veterinarian or pharmacist.

Key Information
- Use in animals is controversial as ethambutol is used for serious infections in humans.
- Can be used as an ingredient in an antimycobacterial “cocktail” for dogs, cats, and birds.
- May have adverse effects on your animal’s eyes and nervous system.

How is this medication useful?
Ethambutol is a medicine used to treat serious infections caused by mycobacterial organisms (such as the one that causes tuberculosis [“TB”] in humans).

The FDA (U.S. Food & Drug Administration) has approved ethambutol for use in humans, but it is not officially approved for use in animals. The FDA allows veterinarians to prescribe and use human products containing this drug in animals in certain situations. You and your veterinarian can discuss why this drug is the most appropriate choice.

What should I tell my veterinarian to see if this medication can be safely given?
Many things might affect how well ethambutol will work in your animal. Be sure to discuss the following with your veterinarian so together you can make the best treatment decisions.
- Other drugs can interact with ethambutol, so be sure to tell your veterinarian and pharmacist what medications (including vitamins, supplements, or herbal therapies) you give your animal, including the amount and time you give each.
- Tell your veterinarian about any conditions or diseases your animal may have now or has had in the past.
- If your animal has been treated for the same disease or condition in the past, tell your veterinarian about the treatment and how well it did or did not work.

If your animal is pregnant or nursing, talk to your veterinarian about the risks of using ethambutol.

Tell your veterinarian and pharmacist about any medication side effects (including allergic reactions, lack of appetite, diarrhea, itching, hair loss) your animal has developed in the past.

**How long until I will know if this medication is working, and how long will the effects of this medication last?**

This medication should start having effects within 1 to 2 hours; however, you may not see the effects of this medication outwardly. Your animal should begin feeling better within 1 to 2 days. The effects of this medication are short-lived, meaning they will stop working within 24 hours, although the benefits may be prolonged if your animal has decreased kidney and/or liver function.

**When should this medication not be used or be used very carefully?**

No drug is 100% safe in all patients, but your veterinarian will discuss with you any specific concerns about using this drug in your animal.

This drug **SHOULD NOT** be used in patients:

- That are allergic to it.

This drug should be used **WITH CAUTION** in patients:

- That have kidney problems.

If your animal has any of these conditions, talk to your veterinarian about the potential risks versus benefits.

**What are the side effects of this medication?**

**Side effects that usually are not serious include:**

- Vomiting, diarrhea, or lack of an appetite.

If any of these signs are severe, worsen, or continue to be a problem, contact your veterinarian.

**Side effects that may be serious or indicate a serious problem:**

- Declining vision or vision loss.
- Weakness, stumbling, acting uncoordinated (clumsy).
- Yellowing of the eyes, gums, or skin (jaundice).

If you see any of these signs, contact your veterinarian immediately.

**If my animal gets too much of this medication (an overdose), what should I do?**

If you witness or suspect an overdose, contact your veterinarian or an animal poison control center for further advice. Animal poison control centers open 24 hours a day include: **Pet Poison HELPLINE** (855-764-7661) and **ASPCA Animal Poison Control Center** (888-426-4435); a consultation fee may be charged for these services.

**How should this medication be given?**

For ethambutol to work properly, give it exactly as your veterinarian has prescribed. Check the prescription label to be sure you are giving the drug correctly.

- The drug may be given either with food or on an empty stomach. If your animal vomits or acts sick after receiving the drug on an empty stomach, try giving the next dose with food or a small treat. If vomiting continues, contact your veterinarian.
- Compounded liquid forms of ethambutol must be measured carefully. Your veterinarian or pharmacist can help by providing special measuring spoons or syringes.
- If you have difficulty getting your animal to take the medicine, contact your veterinarian or pharmacist for tips to help with dosing and reduce the stress of medication time for both you and your animal.
- Ethambutol can be given for various lengths of time. Be sure you understand how long your veterinarian wants you to continue giving this medication. Prescription refills may be necessary before the therapy will be complete. If you want to stop giving this medication, talk to your veterinarian, as there may be important reasons to continue giving it.

**What should I do if I miss giving a dose of this medication?**

If you miss a dose, give it when you remember, but if it is close enough to the time for the next dose, skip the dose you missed and give it at the next scheduled time. After that, return to the regular dosing schedule. Do not double-up or give extra doses.

**How should I store this medication?**

- Store this medication in the original prescription bottle or an approved dosage reminder container (ie, pill minder) at room temperature and protected from light.
- If your veterinarian or pharmacist has prepared (compounded) a special formulation for your animal, follow the storage recommendations and expiration date for the product.
- Keep away from children and other animals.

Can handling this medication be hazardous to me, my family, or other animals?
There are no specific precautions required when handling this medication unless you are allergic to it. Wash your hands after handling any medication.

How should I dispose of this medication if I don’t use it all?
- Do not flush this medication down the toilet or wash it down the sink. If a community drug “take-back” program is available, use this option. If there is no take-back program, mix the drug with coffee grounds or cat litter (to make it undesirable to children and animals and unrecognizable to people who might go through your trash), place the mixture in a sealable plastic bag to keep it from leaking out, and throw the bag out with the regular trash.
- Do not save leftover medication for future use or give it to others to use.

What other information is important for this medication?
- Mycobacterial infections can have serious public health consequences. If you have young children or immunocompromised individuals in your household, you should contact your physician to discuss the situation. Your veterinarian may also be in contact with local health officials to seek guidance about how to ensure your animal is treated in the safest way while keeping your family safe.
- Use of ethambutol may not be allowed in certain animal competitions. Check rules and regulations before entering your animal in a competition while ethambutol is being administered.

If you have any other questions about this medication, contact your veterinarian or pharmacist.

Special Instructions:
